The deadband refers to a range between the heating and cooling setpoints that controls how often the thermostat switches from heating to cooling and vice versa. The smaller the deadband, the more often the thermostat will switch between heating and cooling, which typically happens in the fall and spring of the year. This thermostat can be set for two, four, or six events per day. Select two events if someone is home all day.

Typically, this requires a constant temperature during the day and a different temperature at night. Four events are common for working households. Event 1 WAKE is the morning period. Event 2 DAY is when everybody has left for school or work. With your heat pump system, the remote outdoor sensor helps determine when to turn on the second stage heating for optimal comfort. To reset the thermostat, press the button and the LEFT button at the same time. Hold for five seconds. The information screen, including version, is displayed indicating a reset has occurred. NOTE This will NOT reset any of the programmed settings, and it will not disable any of the security provisions. Manual transmission gear. Please try again. The InStore Pickup option will now be defaulted at checkout. Please verify any information in question with a sales representative.
