Learn more However, everyone can agree on one thing about the iPad As wonderful as it is, its rather expensive. There are loads to choose from from the highend, highcost Samsung Galaxy Tab to the ownbrand specials that are less than a hundred pounds. Somewhere in between the two extremes, youll be seeing a lot of this fellow, the seveninch Linx Commtiva N700. We say that because its also known as the Viewsonic Viewpad 7 or the Commtiva FM6, and several other retailers are known to be interesting in slapping their badge on an OEM version, too. On top of that, the N700 comes with a 4GB microSD card where the Viewpad 7 features no storage in the box.

Even when faced with an obvious choice like that, however, bagging a bargain Android tablet still requires caution. Thats partly because Google itself doesnt reckon the latest available version of the operating system is up to running on devices larger than a mobile phone. As a result, implementation of the OS varies by manufacturer, and workarounds to get Android running on a tablet change from supplier to supplier. To say the quality is variable is like saying Philip Green has a patchy record on tax. Theres also the question of Market access. As essential as the Android Market is to a tablet or smartphone, its far from guaranteed that youll be able to use it. Without it, youre reduced to sideloading applications onto a device, running an alternative firmware or relying on the kind of Marketredux that AppsLib run, which is almost identical to the real thing in every way except that it doesnt have most of the wellknown apps in it. Fortunately, from the perspective of a potential Android tablet buyer, the N700 gets all these basics right. Its running Froyo, the latest and fastest version of the operating system, and has access to the full Android Market. Whats more, its relatively well built and has a capacitive, multitouch screen. Throw in the fact that it also has a 3G modem and its got pretty competitive feature list compared to the iPad. Does that make it the Android tablet to own You will receive a verification email shortly. Please refresh the page and try again. You can unsubscribe at any time and well never share your details without your permission. Visit our corporate site. New York. The N700 has all the trimmings for getting online on the go, with WiFi, Bluetooth and the magical unlocked 3Gmodem builtin. That also means you get free turnbyturn directions using the onboard GPS and Google Maps. And theres a 4GB microSD card thrown in for storage, too. Like the Viewsonic, the N700 is built around a 600MHz Qualcomm processor.

According to Google's rulebook, that means you can't install the Android Flash player. YouTube works, of course, and the proxy-based Skyfire browser will get you into a limited number of video websites, but BBC iPlayer simply throws up an error message no matter how hard you try to get in. Unlike the Archos 70 or Advent Vega, the default player struggles with any slightly esoteric codecs and resolutions bigger than a postage stamp. While lightweight players/apps like xyplayer can render DVD rips watchable, they're not perfect. If you're prepared to sacrifice video playback for something that could realistically replace your netbook, TomTom and ereader for catching up on the news or blogging from the coffee shop or train, then this is the one for you. All rights reserved. To find out more, including how to control cookies, see [here](#). While the Linx Commtiva N700 doesn't really stand toe-to-toe with the iPad in the first respect, it's a relatively capable tablet at an incredibly competitive price. The similarities are furthered by the OS onboard, the Froyo 2.2 version of Android, while the official Android Market app store also features. The capacitive multitouch panel runs at 480 x 800 WVGA, the Qualcomm MSM7227 processor is clocked at 600MHz and the built-in storage is a measly 512 MB though a 4 GB microSD card is supplied in the box. These aren't device-breaking limitations the screen is sharp enough to read quite comfortably, though has a tight viewing angle, and the processor can handle all but the most intensive tasks, but the N700 certainly lacks the premium feel of its rivals. You've got a 3G connection that is missing from the entry-level Apple tablets, a 3 MP camera on the rear and modest front-facing one for video chat, expandable memory from microSD or SDHC, and even the ability to make calls providing you don't mind either hooking up a Bluetooth headset or holding a book-sized device next to your ear.

On the lefthand side of the first homescreen are shortcuts to mail, media, ebooks and the web browser, while the righthand side has a button to access the full apps library, another browser button and phone controls. You could argue that controls limit customisation of the front screen particularly given the chunky left bar can't be removed but we found them quite useful overall. The app library is displayed in a rolling carousel, while the regular Android hardware buttons for Home, Menu, Back and Search sit embedded on the bezel and can be set to optionally vibrate when touched. Tapping out messages or activating smaller web buttons often takes some patience, and while multitouch gesture controls are present, the likes of pinch-to-zoom are hindered by the underpowered processor. Again, it's not crippling, but those used to the silky smooth feel of browsing an iPad will be disappointed. Using the preloaded Swype speedtyping app for instance is rendered all-but useless. We sideloaded Vplayer onto our N700. Standard definition content was fine, with the odd hiccup if we were running lots of things in the background, but don't expect to get HD videos playing here. The lack of Flash support is a shame too, as it would have been a very bold one-finger salute from the little guys to Apple's strict "noFlash" policy on their devices, despite consumer demand. The speakers were actually surprisingly crisp for music and movie playback too, lacking a little in bass, but rounding the N700 up into a rather nice media playing device, easily competing with the midrange Archos units. To be honest, it's mainly that price tag; under 250 would be a steal for a Froyo smartphone, let alone a tablet, and while it has its quirks, the N700 does enough right to warrant your attention.

It'll be completely overshadowed by the next wave of Honeycomb tablets, and even now it stands in the shadows of its big-brand rivals, but that'll likely work in your favour, driving the already low price of this solid bit of kit down even further. POLL Should EA keep Andy Gray as a FIFA 2012 pundit Nissan dealers preparing for green EV number plates Types of Encryption in Password Management for Organizations 1 in 3 mobile customers still being ripped off, claims Which. So it's no surprise that Apples

touch-sensitive must-buy has spawned a legion of imitators, each with its own pros and cons. Great to have a tablet that can connect anywhere; I've had a lot of envious glances from iPad users who can only use Wi-Fi, which amuses greatly. Great value for money; best PAYG SIM recommendation is the. Battery isn't great, a day at best during normal use; although you can just give it a quick blast by connecting to your work PC, so not a huge drawback to be honest. Processor can be a bit sluggish at times and touch screen technology can lag a bit. I need access to my Calendar Google and my eMail also Google. I look up a lot of stuff on the web while I am out and make notes of my great and genius ideas in the oddest of places. I also quite like to be able to listen to podcasts, watch the iPlayer in my downtime or listen to music or comedy. I love technology and believe that it enhances communication and thought rather than getting in the way. I love its apps but hate its general lack of functionality; I am frustrated by its unreliability, appalling battery life and most of all, Apple's belief that it knows best for me the total reliance on iTunes and the AppStore. I love the fact it looks cool, but hate buying into the Apple Fanboy thing.

In other places I use a laptop with Ubuntu on it, a Centos Linux Server, all flavours of Windows including 7 on my laptop and a Mac Mini you can't accuse me of slavishly following one format. So, for me, interoperability, networking etc is a must. The tablet is a nice size to hold slightly too big for a pocket, but which fits in my hoodie pocket nicely. In the hand it is clearly larger than a phone but less bulky than an iPad. The keyboard is touch screen and fairly responsive and can be pecked out in traditional form or you can wiggle your finger around the screen using something called Swype which I imagine could become an effective form of text input even if I'll never quite get up to full dictation speed. I have written at least half this review on the tablet using Swype. If you know your way around a QWERTY keyboard then you can be quite proficient. In next to no time I have almost every app which I can get on my iPhone and which appears to be fully matched in terms of functionality. There is however one big failing on this system as a low cost machine, at least a couple of hundred quid less than its rivals, the system lacks the power to be able to run the latest version of Flash and so horror of horrors it is unable to play the BBC iPlayer. This was a bit of a blow I must admit but when you take into account the rest of the functionality at this price point, it is a small inconvenience. It is unlocked so I took advantage of this and stuck in a SIM from GiffGaff which runs over the O2 network and at a low cost pay as you go tariff features unlimited internet and unlimited texts and a big number of phone minutes. With unlimited data the world really is your oyster. All the social networking apps are available and the GPS means that Google Maps are very useful. There is a route planning app but I haven't yet opened it yet. This is especially cool and I think when on holiday it will become invaluable. On an iPhone this costs a massive amount extra.

I like quite a bit of music on the move and especially comedy shows like "I'm sorry I haven't a clue", and so I expect I will want to upgrade that memory soon a 16 GB card is quite competitive at the moment. The media playing is pretty good and the headset does a pretty good job. There is a user-facing camera as well but I haven't yet sorted out a Skype phone call to test this yet. Four and a half Stars This will save us a fortune down in Devon where Orange is in a deep hole and the O2 signal is the only one that works. If you do have a look and sign up for them, then recognise that I frsimon recommended you, and I'll get extra goodies from them, please remember! Learn how your comment data is processed. fairness, the ViewPad is actually the copy, as Viewsonic decided to OEM the Linx product. Although the two may be physically identical, the pricing couldn't be further apart, with Linx selling the Commtiva N700 for just over 300 around 90 cheaper than Viewsonic's model. That's quite a feat to get all of these features at this price. Corners have had to be cut along the way, but we're pleased to say that build quality isn't one of them.

Although the plastic construction can't compete with the build quality of the Apple iPad, the glossy plastic back and brushed metal style surround look great, and the N700 feels tough. The edges are a little sharp and we prefer the curved corners of the Samsung Galaxy Tab, but the N700 is still comfortable enough to hold in one hand, leaving the other hand free to operate the touchscreen. A leatherette case ships as standard, so you can carry your tablet around with you without worrying about scratching the screen. It even folds in half and props the tablet up so that you can use it handsfree as a media player. Page 1 of 3 Linx Commtiva N700 review 1. Linx Commtiva N700 review 2. Linx Commtiva N700 review 3. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyses reviews to verify trustworthiness. Brand Linx Screen size 7 inches Operating system latest version Android 2.2 FroYo Release year 2014 Contact us UNITED KINGDOM PriceSpy.co.uk Subscribe to our newsletter. Spec wise, the tablet is built around a Qualcomm MSM7227 processor with a clock speed of 600MHz coupled to 512 MB of RAM. August 2, 2020 August 22, 2020 August 9, 2020 August 27, 2020 August 9, 2020 August 10, 2020. Named the N700 from a Taiwanese company called Commtiva, and not to be confused with the other N700 from Aigo, the 7inch Android tablet is already at the FCC offices for certification indicating a US launch should definitely be on the cards.

Elsewhere the tablet's 7inch touch screen is a WVGA capacitive unit supporting multitouch, while a rearfacing 3MP camera with a frontfacing webcam, 3G, WiFi, Bluetooth, GPS, 512MB RAM, and support for microSD cards up to 32GB round out the feature set. But for these products to succeed, price will be a key element; companies probably need to undercut more powerful rivals such as the Galaxy Tab in order to make their mark in the market.
